

# SIERRA VIEW DISTRICT HOSPITAL MASTER PLAN & NEW TOWER

Porterville, CA

Designed as a part of the campus master plan, this five level, 125,000 square foot expansion increases the Hospital's existing 85 beds to a total of 170. The entrance to the building features a light canopy frame that leads into a four story atrium lobby.

The ground level houses ambulatory clinics and a community education conference center. The second floor has special care and intermediate care beds; the third floor includes medical acute beds; and the fourth floor contains an LDR unit. The lower level supports data processing, medical records, and staff facilities.
